PROJECTS

1. Helpdesk Support Ticket Automation System (MVC 2 Architecture)

Developed a full-stack Java web application to automate support ticket lifecycle with priority-based routing, SLA-driven workflows, and knowledge-base integration using MVC architecture (Servlets, JSP, DAO, Service Layer).

2. Data Quality Intelligence for Fraud and Credit Risk Analysis

A modular web-based analytics system that performs multi-dimensional dataset quality assessment, reliability scoring, and performance degradation estimation to support fraud detection and credit risk detection workflows through structured scoring, visualization, and report generation.

3. NeuroBeat: An Emotion-Aware Music Recommendation and Mood-Based Song Discovery System

NeuroBeat is an AI-powered, emotion-aware music recommendation project that analyzes user text to detect mood and then suggests personalized songs using contextual signals such as time of day, activity, and weather, creating a more responsive and personalized listening experience.
